

There are many different kinds of living things and they live in different places. You already observed some animals that live in a rainforest habitat. Now you are going to compare the rainforest animal you created to the rainforest animal you observed.

1. Re-watch the video of the rainforest animals at Roger Williams Park Zoo that you observed and go back and reread your Scientists Observation Form.

[Two-Toed Sloth](#)

[Golden Lion Tamarin](#)

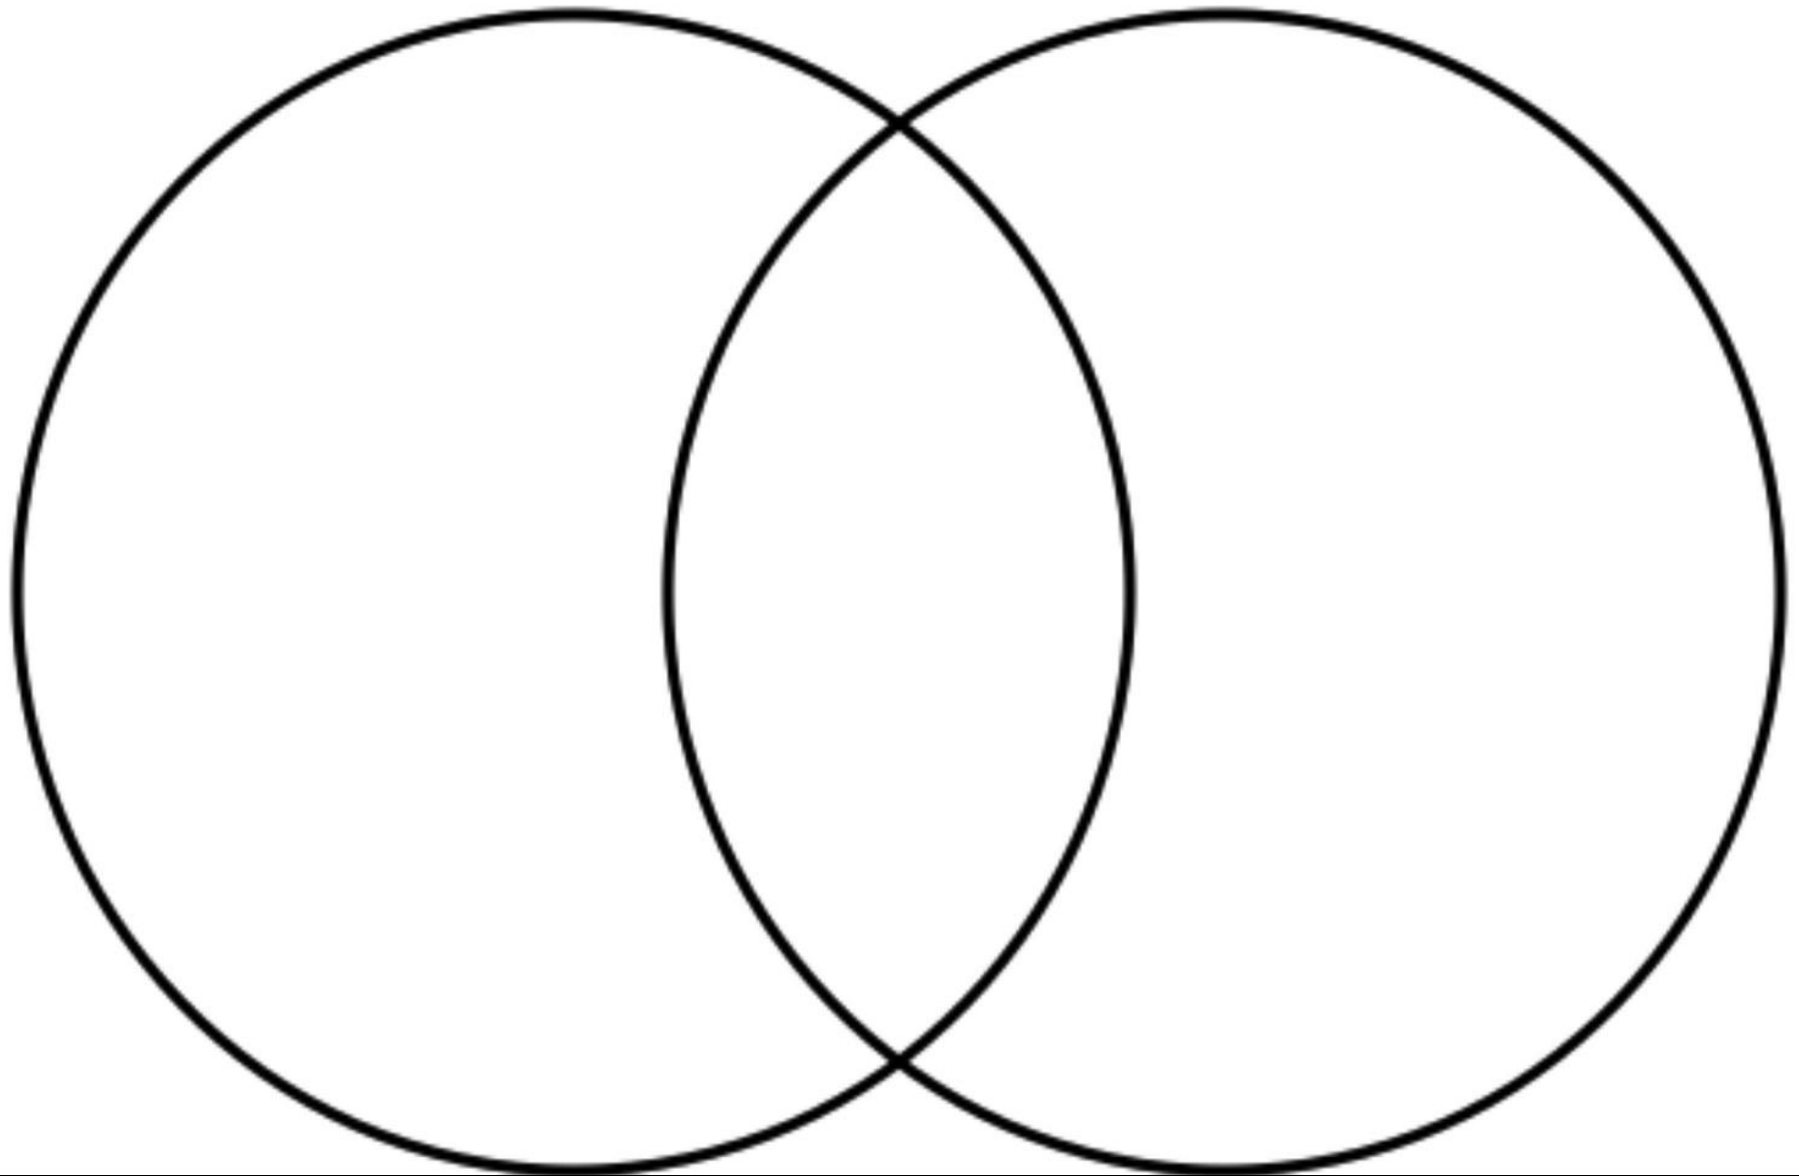

[Elegant Crested Tinamou](#)

[Southern Tamandua](#)

2. Next, use the Venn Diagram below to compare and contrast the new rainforest animal that you created in the last activity with the animal you observed in the video.

3. Then, tell your classmates about how they are the same and different.

Use the space below to tell how the two rainforest animals are the same and how they are different.
